DETAILED ACTION

Allowable Subject Matter

1. Claims 13-27, 34-47 and 50-52 allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Prior art failed to establish the required relationship between the first and the second beam with respect to the first and the second trench.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12 rejected under 35 U.S.C. 103(a) as being unpatentable over Shaw et al. (5,610,335) in view of Shaw et al. (5,847,454) further in view of Laermer et al. (6,008,138)

Regarding Claims 1-12, Shaw et al. '335 disclose a microelectromechanical lateral accelerometer where in Fig. 17, cantilever type beam 380 is disposed inside trench 410 with insulating layer 403, and conductive plates 404 and 406. Beam is connected to substrate 390 on one portion with connector 396. The second portion of the beam is spaced apart from the walls of the trench 411. Shaw et al. '335 fail to specifically disclose that one portion of the beam is movable and the other portion is fixed/attached/connected to the substrate and the required sacrificial layer. However, Shaw et al. '454 disclose electrically-isolated released microstructures where in Claim 1,

Art Unit: 2826

Shat et al. disclose a beam with one portion interconnected and one portion movable.

Furthermore, Laermer et al. disclose a process for making micromechanical structures where in Figs. 2-4 element 5 is sacrificial layer.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required movable and connected portions of the cantilever beam and the required sacrificial layer in Shaw et al. '335 as taught by Shaw et al. '454 and Laermer et al. respectively, in order to have a semiconductor device with more functionality.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
